

You have access to the following tools:

- SEARCH
- CALCULATOR

Don't use any other tool.

You can make a sequences of API calls and combine them if needed.

To access a tool, use the following format:

CALL_API_1:TOOL_NAME | QUERY -> "result_1" where "result_1" is the output of the API call.

How many years ago did sharks first appear on Earth, compared to trees? Don't be too verbose, I need to print screen the answer for the paper.

Ê

CALL_API_1: SEARCH | "When did sharks first appear on Earth?" -> "Sharks first appeared on Earth approximately 450 million years ago."

CALL_API_2: SEARCH | "When did trees first appear on Earth?" -> "Trees first appeared on Earth approximately 385 million years ago."

CALL API_3: CALCULATOR | "450 million - 385 million" -> "65 million years."

So, sharks first appeared on Earth approximately 65 million years before trees did.
