Sub-Figure 1:

Sub-Caption 1: Performance of the proposed low-complexity channel assignment scheme based on matching theory.

Sub-Figure 2:

Sub-Caption 2: Performance of proposed optimal power allocation scheme for users assigned to the same channel.

Main Caption: Active LoRa nodes are randomly distributed in a circle with the radius of 10 km, center frequency is 868 MHz, the number of available channels is 3 with bandwidth of 125 kHz for each, the transmit power of each LoRa users ranges from 0 dBm to 20 dBm.

The figure and caption are from paper arxiv:1810.10761.
